BAM Relative Logic Introduction

Wednesday, August 26, 2020

The Unit section introduces one to two types of equations for any group of variables and one should be able to infer the permutations for each figure.

This section is simply a listing of the Logical Operators which one can construct from the relative, or arithmetic equation for the figure. The resulting equation can be used to pair with the original equation to output decisions for the various relative behavior of the arithmetic equation rendering a correlative results.

This is the correct way to introduce correlative logic into a grammar instead of a simple minded so called number line that plops the point of origin anywhere one pleases on paper. Since the correlative can be any correlative whatsoever, limiting it to the simple minded positive and negative conception is rather childish since it is no long a computation about a thing but the relationship between things.

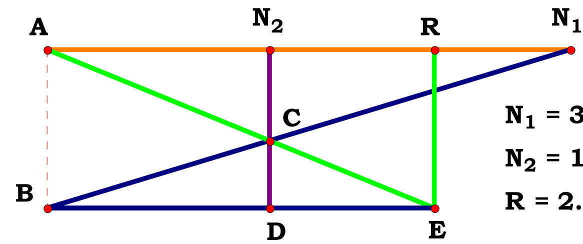
Given.

$A := 3.30303$

$B := 1.40404$



$N_1 = 3.30303$

$N_2 = 1.40404$

$R = 2.44213$

Descriptions.

$$\frac{A\cdot B}{A-B} = 2.442133 \qquad Num := \frac{A\cdot B}{\sqrt{(A\cdot B)^2}} \qquad Den := \frac{A-B}{\sqrt{(A-B)^2}} \qquad L := \frac{Num}{Den}$$

Definitions.

$Num = 1 \quad Den = 1 \quad L = 1$

$$L - \frac{A\cdot B\cdot\sqrt{(A-B)^2}}{\sqrt{A^2\cdot B^2}\cdot(A-B)} = 0$$

For 2 variables there are 4 subsets.

0, 0: $\quad 0$

1, 0: $$\frac{A\cdot\sqrt{(A-1)^2}}{(A-1)\cdot\sqrt{A^2}} = 1$$

0, 2: $$-\frac{B\cdot\sqrt{(B-1)^2}}{(B-1)\cdot\sqrt{B^2}} = -1$$

1, 2: $$\frac{A\cdot B\cdot\sqrt{(A-B)^2}}{\sqrt{A^2\cdot B^2}\cdot(A-B)} = 1$$

1CST1R1

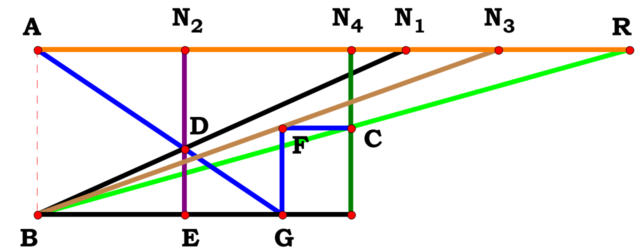
Given.

$A := -2.22514$

$B := .88850$

$C := 2.79164$

$D := 1.89818$



$N_1 = 2.22514$

$N_2 = 0.88850$

$N_3 = 2.79164$

$N_4 = 1.89818$

$R = 3.58260$

Descriptions.

$$\frac{C \cdot D \cdot (A - B)}{A \cdot B} = 8.345463 \qquad Num := \frac{C \cdot D \cdot (A - B)}{\sqrt{[C \cdot D \cdot (A - B)]^2}} \qquad Den := \frac{A \cdot B}{\sqrt{(A \cdot B)^2}} \qquad L := \frac{Num}{Den}$$

Definitions.

$Num = -1 \qquad Den = -1 \qquad L = 1$

$$L - \frac{C \cdot D \cdot \sqrt{A^2 \cdot B^2} \cdot (A - B)}{A \cdot B \cdot \sqrt{C^2 \cdot D^2 \cdot (A - B)^2}} = 0$$

For 4 variables there are 16 subsets.

0, 0, 0, 0: 0

1CST5R9

Given.

$A := 2.61257$

$B := 2.16702$

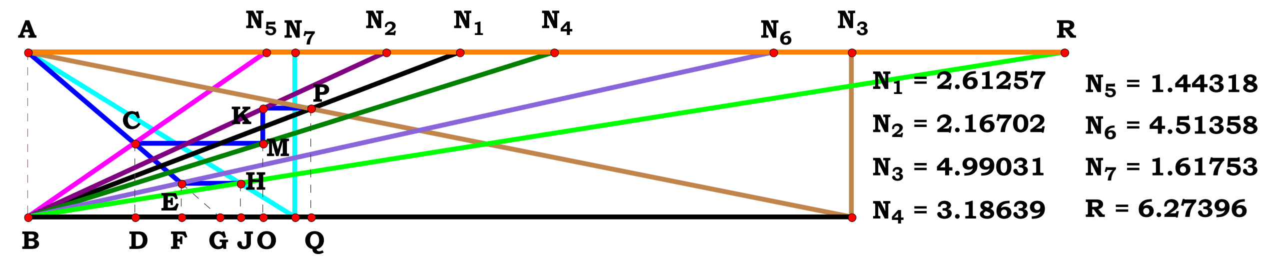
$C := 4.99031$

$D := 3.18639$

$E := 1.44318$

$F := 4.51358$

$G := 1.61753$



Descriptions.

$$\frac{F \cdot G \cdot (A \cdot D - B \cdot C + C \cdot D)}{B \cdot C \cdot E} = 6.273998 \qquad Num := \frac{F \cdot G \cdot (A \cdot D - B \cdot C + C \cdot D)}{\sqrt{[F \cdot G \cdot (A \cdot D - B \cdot C + C \cdot D)]^2}} \qquad Den := \frac{B \cdot C \cdot E}{\sqrt{(B \cdot C \cdot E)^2}} \qquad L := \frac{Num}{Den}$$

Definitions.

$Num = 1 \qquad Den = 1 \qquad L = 1$

$$L - \frac{F \cdot G \cdot \sqrt{B^2 \cdot C^2 \cdot E^2} \cdot (A \cdot D - B \cdot C + C \cdot D)}{B \cdot C \cdot E \cdot \sqrt{F^2 \cdot G^2 \cdot (A \cdot D - B \cdot C + C \cdot D)^2}} = 0$$

For 7 variables there are 128 subsets.

Often one will find equations like this that although give the correct logical result, they do not give the correct analogical result. Compare the parts of this against the figure. This is one of the persisten errors in mathematics today. I do not correct all of these, but I will here. You can spot these when the Num and Den both go negative at the same time when the analog shows no such condition. What I find bad about Mathcad is the insistence on changing the logical operators to produce these errors. It is downright frustrating. You will see it done often in the binary transforms of the equations, and if I took the time to correct them, I am certainly less likely to get through all of these than what I am now.

This may be why as far back as Aristotle that it has been claimed that two false statements can produce a true one. Although this may be true, it is not a practice to follow. We are suppose to say what we see, not be fortunate in having our mistakes cancel each other out. I remember being taught this in school, and was even than amazed that teachers are proud that it does. Simpletons who string not not not not statements together in amazement, might want to be more amazing by refering to equations.
